Note: Weighted counts (#) represent 3-yr averages, rounded to the nearest hundred; n/r (Not Reportable) - If the unweighted total responses for a dimension (row) is <30 that row will not be shown

The trend analysis section shows the trend for the selected health variable over selected years in a table and a graph. 3-Year Weighted Total Responses: This number is a weighted representation of the mothers of babies delivered in a given year, who responded to a particular question in the survey. For most questions this will be the mothers of all babies delivered in a given year. For some secondary questions only a subset of the population was asked the question. For example, all survey participants were asked if they smoked during pregnancy, but only those who answered yes were asked how many cigarettes a day. If a dimension value is unknown for a particular survey record, that record will not be included in the counts for that particular dimension.

Note: Data collection for household income changed in 2004 and again in 2012. Because of this, income data does not exist for some 3-year aggregate periods.

Below are the indicators included in this report and the long description for each indicator.
