

## Deaths in Hawaii Due to Asthma Among Persons Under 35 Years Old

Death Counts, Mortality Rates, and Years of Potential Life Lost for Asthma Among Persons Under 35 Years Old for the State of Hawaii (Residents Only), by State, County of Residence, Gender, and Census Race-Ethnicity, by 10-Year Aggregate, for the Years 2006-2015

*For persons under 35 years old, this report displays the number of deaths, the mortality rate (MR) per 100,000 population under 35 years old, and the years of potential life lost (YPLL) where the underlying cause of death is asthma (ICD-10 codes J45-J46). YPLL is measured to age 75 years. Data are shown by year, in descending order. The data are displayed by selected dimensions and attributes. If a dimension or attribute value is unknown for a particular record, that record will not be included in the counts for that particular dimension. More detailed race data is not available because denominators are restricted by data available from the census.*
