

Deaths in Hawaii Due to Female Breast Cancer

Death Counts, Age-Adjusted Mortality Rates, and Years of Potential Life Lost for Female Breast Cancer for the State of Hawaii (Residents Only), by State, County of Residence, and Census Race-Ethnicity, by 3-Year Aggregates, for the Years 2001-2015

This report displays the number of deaths, the age-adjusted mortality rate (AAMR) per 100,000 females, and the years of potential life lost (YPLL) where the underlying cause of death is female breast cancer (ICD-10 code C50). Mortality rates are age-adjusted using the 2000 U.S. Standard Population, and YPLL is measured to age 75 years. Data are shown by year, in descending order. The data are displayed by selected dimensions and attributes. If a dimension or attribute value is unknown for a particular record, that record will not be included in the counts for that particular dimension. More detailed race data is not available because denominators are restricted by data available from the census.
