

Deaths in Hawaii Due to Falls Among Adults Aged 65 Years and Older

Death Counts, Mortality Rates, and Years of Potential Life Lost for Falls Among Adults Aged 65 Years and Older for the State of Hawaii (Residents Only), by State, County of Residence, Gender, and Census Race-Ethnicity, by 3-Year Aggregates, for the Years 2001-2015

For adults aged 65 years and older, this report displays the number of deaths, the mortality rate (MR) per 100,000 population aged 65+ years, and the years of potential life lost (YPLL) where the underlying cause of death is falls (ICD-10 codes W00-W19). YPLL is measured to age 75 years. Data are shown by year, in descending order. The data are displayed by selected dimensions and attributes. If a dimension or attribute value is unknown for a particular record, that record will not be included in the counts for that particular dimension. More detailed race data is not available because denominators are restricted by data available from the census.
