

Induced Terminations of Pregnancy (ITOPs) in Hawaii

ITOPs, for the State of Hawaii (Residents Only), by State, County of Residence and Age for the Years 2012-2019

This report displays the number of induced terminations of pregnancy (ITOPs) and the ITOPs rate per 1000 live births for Hawaii residents. ITOPs are the purposeful interruptions of an intrauterine pregnancy with the intention other than to produce a live-born infant. Data are shown by year in descending order. Data for ITOPs and births come from Vital Statistics records from the Hawaii Department of Health Office of Health Status Monitoring (DOH OHSM). The report is based on ITOPs and births in a calendar year to women who reside in Hawaii. Since there is a lag in ITOPs reporting to DOH OHSM, recent numbers may vary slightly by year. Records with dimension values that are unknown are not included in the calculations. Cells with 1 to 9 ITOPs are suppressed along with their corresponding rate.
