## Behavioral Risk Factor Surveillance System (BRFSS)

### Methodology

The zip code field is used to code the island, community and school complex dimensions. Some zip codes include residents in more than one Primary Care Service Area. When that happens, the residents are allocated to the Primary Care Service Areas as displayed in the second column.

## Pregnancy Risk Assessment Monitoring System (PRAMS)

Geography data is collected from the birth certificate. Kauai, Maui and Hawai'i Counties are oversampled to produce stable county-level estimates.

## Youth Risk Behavior Survey (YRBS)

State and county data are collected based on the location of the school. Kauai, Maui and Hawai'i Counties are oversampled to produce stable county-level estimates.

## Youth Tobacco Survey (YTS)

Only state level data is collected.

## Vital Statistics

### Methodology

In the Vital Statistics system (birth and death data), the census tract field is used to code the State, County and the Primary Care Service Area dimensions. The zip code field is used to code Island, Community and School Complex.

Because the geography dimensions are based on two different database fields (census tract and zip code), counts across their associated geographic areas may vary slightly due to different missing data within each record. For example, a record may have data in the zip code field but be missing data in the census tract field, or vice versa.
