Introduction

The US Census Bureau (Census) considers race and ethnicity as two separate concepts. They define race as a person’s self-identification with one or more social groups, which include “White, Black or African American, Asian, American Indian and Alaska Native, Native Hawaiian or Other Pacific Islander, or some other race.” The Census defines ethnicity as whether a person is of Hispanic origin or not.¹

In Hawai‘i, we recognize that these overarching race categories from the Census are composed of people with distinct ethnicities. People who are Asian can identify as one or more ethnicities within the Asian race category; examples include Japanese, Chinese, Korean, Vietnamese, Filipino, Thai, and many others. Similarly, Other Pacific Islanders can be Guamanian, Chamorro, Samoan, Tongan, or Chuukese, to name a few. These groups have distinct cultural, culinary, and religious practices and immigration stories to Hawai‘i.

Accordingly, the state makes a concerted effort to capture and report race and ethnic information at a more granular level to help address community concerns and target interventions. HHDW uses the term race/ethnicity to refer to the races and ethnicities most commonly found in Hawai‘i and collected by the different data systems within the Hawai‘i State Department of Health (DOH).

As of 2023, we are changing the naming convention across datasets to better align with national reporting standards and reflect the naming conventions in the data collection instruments. We will be replacing the term “Caucasian” with “White” and “Native Alaskan/American Indian” with “American Indian or Alaska Native” in the HHDW conformed race/ethnicity dimensions.

This document details how the data collected by the DOH is mapped into the race/ethnicity variables in the warehouse by data source. In order of detail, they are:

- Program race/ethnicity (most granular, as collected)
- DOH race/ethnicity (conformed into major Hawai‘i categories)
- Census race/ethnicity (conformed into national categories specified by the Office of Management and Budget)

¹US Census Bureau. Race & Ethnicity. January 2017.

Behavioral Risk Factor Surveillance System (BRFSS)

BRFSS Methodology

In all sections, the category "Hawaiian" also includes "Part Hawaiian." Ethnicity is self-reported.

In BRFSS, respondents may select up to 6 ethnicities. HHDW then creates a single ethnicity for reporting purposes. If more than one response is chosen, the following rules apply:

1. If Hawaiian is one of the multiple ethnicities listed, Hawaiian is coded.
2. If a non-White ethnicity is listed with a White ethnicity, the non-White ethnicity is coded.
3. If there is more than one non-White ethnicity listed, the first one is coded.
4. If there is more than one White ethnicity listed, the first one is coded.

BRFSS 2017-2021

Survey Variable Name(s): MRACE1

Survey Text: "Which one or more of the following would you say is your race?"

Missing	Removed from the denominator

Youth Risk Behavior Surveillance System (YRBS)

YRBS Methodology

In all sections, the category "Hawaiian" also includes "Part Hawaiian." Race/ethnicity is self-reported.

YRBS 2011-2021

Survey Variable Name(s): RACEETH

Survey Text:

- Q4 "Are you Hispanic or Latino?"
- Q5: "What is your race? (Select one or more responses)".

HHDW Health Indicator Name:

- PRGRACEIND_N — Program Race/Ethnicity (PRG)
- DOHRACEIND_N — DOH Race/Ethnicity (DOH)
- CENRACEIND_N — Census Race (Census)

From 2011 to 2021, Q4 and Q5 were combined by the CDC into a single race/ethnicity (RACEETH) variable for reporting purposes. The following rules apply:

1. If Hispanic/Latino is selected alone or in combination with one or more races, then Hispanic/Latino is coded.
2. If Hispanic/Latino is not selected and Hawaiian is one or more of the races listed, Hawaiian is coded.
3. If Hispanic/Latino is not selected and a single race is recorded, then that race is coded.
4. If Hispanic/Latino is not selected, and two or more non-Hawaiian races are recorded, then Multiple - non-Hispanic is coded.

Vital Statistics

Vital Statistics Methodology

The birth certificate allows for up to 4 race/ethnicities to be captured for both the mother and the father. Ethnicity of the child is based on the ethnicity of the father. It is based on the ethnicity of the mother when the ethnicity of the father is unknown.

Death certificates are completed by a physician, advanced practice registered nurse, medical examiner, or coroner. Race/ethnicity information may be obtained from the medical record or the next of kin. The primary party responsible for filling out the race section for the death registration is the mortuary, and multiple races may be reported.

In all sections, the category "Hawaiian" also includes "Part Hawaiian." Ethnicity is self-reported.

For reporting and analysis purposes, only one race/ethnicity is coded from the birth or death certificate. If more than one ethnicity is listed on the certificate, the following rules apply:

1. If Hawaiian is one of the multiple ethnicities listed, Part Hawaiian is coded.
2. If a non-White ethnicity is listed with a White ethnicity, the non-White ethnicity is coded.
3. If there is more than one non-White ethnicity listed, the first one is coded.
4. If there is more than one White ethnicity listed, the first one is coded.

Note: Puerto Rican, Portuguese, Mexican, and Cuban are all coded as White.
