## Report Summary

This report displays the number of induced terminations of pregnancy (ITOPs) and the ITOPs rate per 1,000 live births for Hawai'i residents. ITOPs are the purposeful interruptions of an intrauterine pregnancy with the intention other than to produce a live-born infant. The ITOPs rate is the number of ITOPs per 1,000 live births. Data for ITOPs and live births come from Vital Statistics records from the Hawai'i State Department of Health, Office of Health Status Monitoring (DOH, OHSM). The report is based on ITOPs and births in a calendar year to women who reside in Hawai'i. As there is a lag in ITOPs reporting to OHSM, recent numbers may vary slightly by year. Records with dimension values that are unknown are not included in the calculations. Cells with counts of 1 to 9 ITOPs are suppressed as are rates based on fewer than 20 counts.

For additional information about ITOPs, please look here:
